

Math Formulas

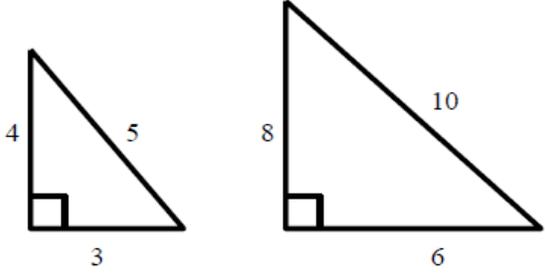

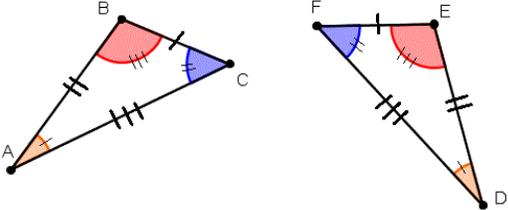

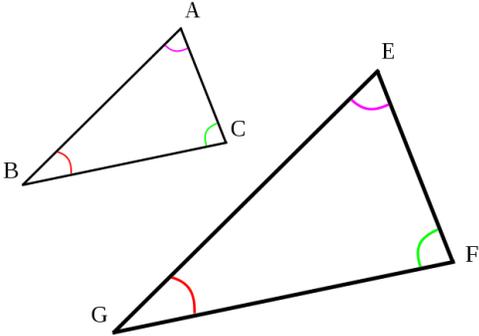

Angles

| | |
|---|---|
| <p>Right Angles measure 90 degrees</p> |  |
| <p>Supplementary angles add up to 180 degrees</p> |  |
| <p>Vertical angles are congruent</p> |  |
| <p>For parallel lines cut by a transversal, alternate interior angles are congruent</p> |  |

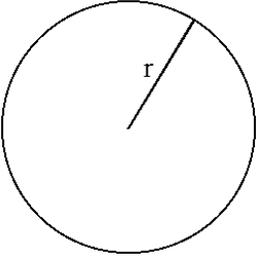

Triangles

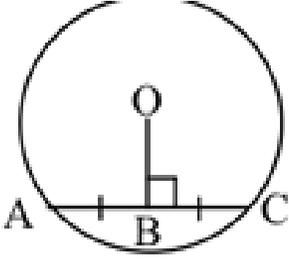

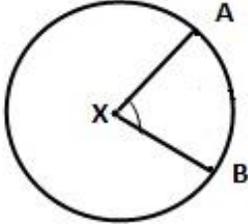

For ALL TRIANGLES, the 3 angles add to 180 degrees and Area $A = (\frac{1}{2}) \text{ base} * \text{height}$

| | |
|--|---|
| <p>Equilateral Triangle has 3 identical sides and 3 identical angles of 60 degrees (since $60 + 60 + 60 = 180$)</p> |  |
| <p>Isosceles Triangle has 2 identical sides and 2 identical angles</p> |  |
| <p>Right Triangle has one 90 degree angle, sides that satisfy $a^2 + b^2 = c^2$ (Pythag. Thm.), and the other 2 angles are < 90 degrees</p> |  |
| <p>45-45-90 Right Triangle has sides with ratio $1:1:\sqrt{2}$</p> |  |
| <p>30-60-90 Right Triangle has sides with ratio $1:2:\sqrt{3}$ (hypotenuse = 2)</p> |  |

| | |
|--|---|
| <p>3-4-5 Right Triangle has sides proportional to 3, 4, & 5</p> |  |
| <p>Congruent Triangles have identical side lengths and angles. They may have been rotated or reflected relative to one another and still be congruent.</p> |  |
| <p>Similar Triangles have identical corresponding angles & proportional side lengths</p> |  |

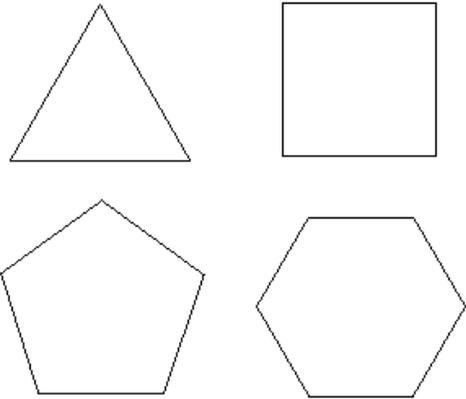

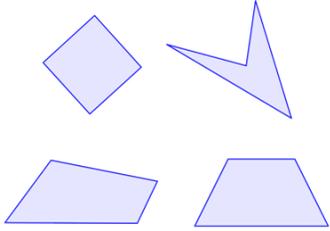

Circles

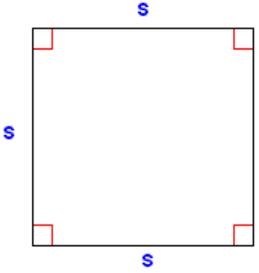

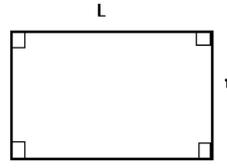

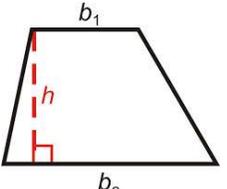

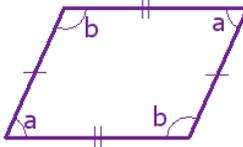

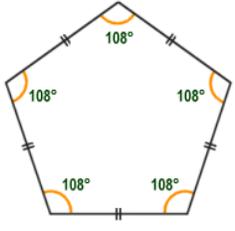

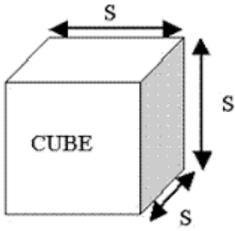

| | |
|---|--|
| <p>Area $A = \pi r^2$ Circumference $C = 2\pi r$ Diameter $d = 2r$</p> |  |
|---|--|

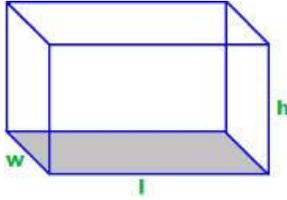

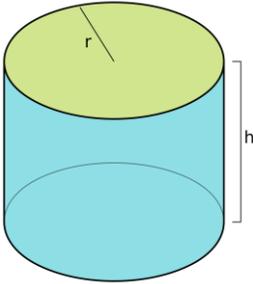

| | |
|--|--|
| <p>The perpendicular bisector of a chord in a circle passes through the center of the circle</p> |  |
| <p>Measure of arc AB = x Length of arc AB = $2\pi r \left(\frac{x}{360}\right)$</p> |  |

Polygons

Interior angles of n-sided polygon add up to $(n-2)*180$
Perimeter of a polygon is the sum of the side lengths

| | |
|---|--|
| <p>Regular Polygon has equal side lengths and equal angles each measuring $\frac{(n-2)*180}{n}$</p> |  |
| <p>Quadrilateral is a 4-sided polygon The angles of a quadrilateral sum to $(4-2)180 = 360$</p> |  |

| | |
|---|--|
| <p>Square with side length s</p> <p>Area = s^2 Perimeter = $4s$</p> |  |
| <p>Rectangle</p> <p>Area = lw Perimeter = $2l + 2w$</p> |  |
| <p>Trapezoid is a quadrilateral with one pair of parallel sides. Find area by dividing into simpler shapes.</p> $A = \frac{b_1 + b_2}{2} h$ |  |
| <p>Parallelogram is a quadrilateral with two pairs of parallel sides. Opposite sides are equal, opposite angles have equal measure.</p> |  |
| <p>Regular Pentagon is a 5-sided polygon with equal sides and equal angles. The five angles each measure $(5-2)180/5=108$</p> |  |
| <p>Cube $V = s^3$ $A = 6s^2$</p> |  |

| | |
|--|--|
| <p>Box $V = lwh$ $A = 2lw + 2lh + 2wh$</p> |  |
| <p>Cylinder $V = \pi r^2 h$</p> |  |

Other Formulas to Know

Negative Exponent: $x^{-n} = 1/x^n$

Raising Power to Powers: Multiply exponents

ex) $(x^2)^3 = x^6$

Multiplying Power Exponents: Add exponents and keep the same base

ex) $(x^2)(x^3) = x^5$

Dividing Power Exponents: Subtract exponents and keep same base

ex) $x^6 / x^4 = x^2$

Factoring Difference of squares

$a^2 - b^2 = (a+b)(a-b)$

FOIL: First, Outside, Inside, Last

ex) $(x-3)(x+5) =$
 $x^2 + 5x - 3x - 15 =$
 $x^2 + 2x - 15$

Midpoint Formula: $(\frac{x_1+x_2}{2}, \frac{y_1+y_2}{2})$

Percents: Use proportions

ex) 75% of 300: $\frac{75}{100} = \frac{x}{300}$
